**Feltham, TW14 8HA**

## Digital Primary Care for a modern, efficient and responsive health service.

GP IT systems sit at the heart of primary care technology facilitating and recording millions of interactions with patients every week. GP practices have led the way in the move from paper to digital record-keeping and are now well on the way to offering video consultations, online appointment bookings and repeat prescriptions, across all practices in England.

In a challenging financial environment, IT services must not only improve the quality of care through enhancing the patients' experience of services, but also enable the practice to realise efficiency benefits such as a reduced administrative burden. There is a need to continue to develop IT functionality which responds to the evolving needs of patients and underpins integration across care pathways.

Cinos Communications Services invites you to join NHS England, NHS Digital, your peers and industry professionals to discuss the challenges, triumphs and visions.

The event will feature updates on HSCN & Public Wi-Fi, comments from Commissioners and GPIT Leads encouraging an open, free dialogue and a forum for thought leadership with input from technology industry professionals on Networking, Telecommunications, Wi-Fi & importantly Security.

### Event Agenda

- 9:30** – Arrival
- 9:45** – Welcome -
