WEY Smart Touch

The Smartest Keyboard in the World

WEY Smart Touch

Desktop Integration – Multifunctional Keyboard

Smart is better than good

WEY Multifunctional Keyboards have been deployed in over 35,000 workplaces around the world. Financial traders have written history using them to move the markets. Control room operators use them to manage all their systems. But even great products can be improved upon. Here comes the future.

Description

WEY Technology develops world class keyboards which are second to none. The flagship WEY Smart Touch Keyboard offers uncompromising functionality and ergonomics.

Access multiple workstations without performance loss using a single keyboard and mouse. Directly control monitors with a single push of a button. Use the touch-screen LCD display to stream video or execute complex application inputs.

The keyboard is characterised by its adaptability. All platforms are supported and customised accessories ensure the optimal management of your business processes.

The WEY Smart Touch provides the ideal user interface for the WEY Distribution Platform so that users can access, control and share a virtually unlimited number of workstations and screens.

Highlights

- Touch-sensitive 10.1" LCD colour display (1280x800) with video inputs
- Direct intuitive control of up to 16 PCs, or even more with the WEY Distribution Platform
- Cost-efficiency and security due to multiple user access to sources
- Fully expandable functionality with programmable function keys
- High flexibility due to multiple interfaces (serial, USB, audio, etc.)
- Supports WEY Ethernet protocol including video streaming
- Access workstations at multiple locations
- Expandable interactivity with optional software modules
- Removable personal keyboard unit to enable hygienic workplace sharing
- Green IT solution with built-in brightness and movement sensors
- Configuration backup
- Password security

High performance workplaces with maximum security and efficiency

Intuitive control of multiple workstations with a single keyboard and mouse

Enhance control and profitability by sharing services among desks

Features

Functionality and Ergonomics

The WEY Smart Touch Keyboard offers almost unlimited functionality and intuitive user interfaces. Due to the modular architecture, the keyboard can be customised to meet individual requirements.

Selecting the active computer is very simple. A single keystroke suffices and the desired source appears on the screen and is placed under the user's immediate control.

A quick ejection mechanism releases the keyboard from the housing unit and allows for personal keyboards. Thus, multiple operators who work in shifts can sit at the same workplace but still use exclusively their own individual keyboard – a great hygienic benefit. An ergonomic hand rest enhances user comfort.

WEY Technology is committed to the development of environmentally friendly IT solutions. With this in mind, the WEY Smart Touch incorporates light sensors which automatically adjust the brightness of the LCD screen to light conditions in the office. Movement sensors detect the presence of an operator, putting the keyboard into sleep mode when it is unattended, and waking it up again when the user returns to the desk.

The WEY Smart Touch Keyboard supports a wide variety of interfaces (USB, Mini USB, serial, Ethernet with PoE+, etc.) as well as virtually any platform for trading floors and control rooms. Audio signals can be routed to integrated speakers or a headphone set. The look and feel of the user interface can be customised with scripts.

Technical Information

Connectors - Smart Touch Keyboard

- 1x Gigabit Ethernet with PoE+
- 1x MiniDin Power
- 3x USB A
- 1x 3.5mm Jack Audio Headphone
- 1x 3.5mm Jack Audio Microphone
- 1x Mini USB (Service)

Connectors - Smart Connector

- 2x Gigabit Ethernet
- 4x Mini USB
- 4x 3.5mm Jack Audio Line In
- 1x RJ12 RS232
- 1x Mini USB (Service)
